

I.L.S Engineering Ltd offers a unique view and partnership with your company, to achieve quickly and efficiently major savings for your specific energy conservation requirements.

From beginning to end we endeavor to understand your energy needs and have the experts in place to help you. We are here to assist you in the initiation & implementation of your Energy Management Action Program (EMAP). With this approach you will attain the IS393 approval.

Why are we different?

We recognise the importance of your specific needs and address each survey with the individuality it requires. From the moment we enter into partnership, we are totally committed to return a KWh saving for your company. **You** know your building and production; **We** have the expertise to increase efficiency. This is why a partnership is crucial in achieving positive results with up to 40% savings.

Why are we so confident in our results?

Simply because our surveys are tailored to your specific requirements. Our belief is that energy is like a machine, which needs to be maintained and serviced. With this approach we want to continue to monitor, manage and maintain your energy, just as you would any other machine.

ILS offers you a unique package within the energy conservation industry.

As you would expect with the maintenance on any machine, we require a point of contact. This allows decisions to be made effectively and quickly, resulting in savings within the first 3 months. The progress allows all involved to share in the satisfaction of achieving goals and targets.

1. ILS wants to work with you to reduce your initial energy consumption.
 2. We aim to show you results within 3 months.
 3. Open opportunities to explore and allow further investment in energy management with your company.
- Our presentation (approx.15 mins) will provide the answers necessary for you to decide how you wish to proceed with your Energy Conservation Project.
